Accuracy Your Patients Demand

**BIOMEDICAL EQUIPMENT SERVICE
WITH INTEGRITY**

20+ YEARS IN BUSINESS

ONTARIO-WIDE SERVICE

COLLEGE ACCREDITATION SUPPORT

LICENSED & INSURED

AT A GLANCE

The Short Version

WHO

Integrity Biomedical — an independent, Ontario-owned biomedical equipment service company with 20+ years in the field.

WHAT

Inspection, preventive maintenance, calibration, and repair of your diagnostic and treatment equipment.

WHEN

Scheduled maintenance and calibration, plus responsive repair when equipment goes down.

WHERE

On-site, at your facility, anywhere in Ontario.

WHY

Because a treatment and diagnosis is only as good as the equipment behind it — and your facility's licensing depends on proving that.

THE CASE FOR US

Why Your Clinic Needs a Biomedical Service Provider

- ✓ **Treatment and Diagnosis Is Only as Good as the Equipment** — Calibration drift in a stress test system or ophthalmic device doesn't announce itself — it just quietly affects results.
- ✓ **Emergency Equipment Has to Work the First Time** — A defibrillator or crash cart component gets tested once, in an emergency. Regular checks are how you make sure it passes.
- ✓ **Licensing-Ready Documentation** — Records that support your facility's Independent Health Facilities Act and Out-of-Hospital Premises requirements.
- ✓ **One Provider, Every Brand** — Honest, manufacturer-neutral service across cardiac, ophthalmic, and diagnostic equipment alike.

An independent biomedical provider is how you protect diagnostic accuracy, patient safety, and your facility's licence — all at once.

COMPLIANCE, HANDLED

Built Around What Your Regulators Expect

Independent Health Facilities Act (IHFA)

OHIP-funded diagnostic and therapeutic facilities are expected to maintain a **quality management program mandated by the IHFA** — we help you document it.

CPSO Out-of-Hospital Premises Inspection Program (OHPIP)

Procedure-based specialty clinics are held to a documented equipment maintenance standard.

Health Canada Medical Devices Regulations

Diagnostic and therapeutic devices are federally regulated — calibration and service records should reflect that.

We give you the paper trail before anyone asks for it.
